

Compton: ONE hard e^- — a single track

81%

of Al legs
cascade γ
2.6–7.7 MeV

He-3 +
Al capsule

*one electron fires BOTH detectors — NOT a pair,
so it is separable from the e^+e^- signal*

Pair production: a REAL e^+e^- — the dangerous one

17%

of Al legs
(was 16%)

He-3 +
Al capsule $\gamma \rightarrow e^+e^-$
in the Al

*a genuine e^+e^- pair = the SAME final state as X17 / IPC;
45% converts in the Al capsule itself (51% incl. its CFRP wrap)*
